Technology:

Screen capture

Screen capture software, such as Jing, captures activities on a computer screen and audio narration to create a simple video presentation.

Learning Goals:

• Improve student writing by providing meaningful, accessible video feedback (empirically shown to be effective)
• Teach methods, such as statistics and processing data, using video tutorials
• Present technical topics, such as software use, using video tutorials

Description:

Capture software is used to record the professor scrolling through a paper and discussing its grading. The session video is uploaded to the web and a link provided to student. Similar videos of screen activity and narration serve as tutorials.
