Technology:

Video Narratives

Partnering with CEL, faculty can have their students learn basic video editing and narrative development to complete academically rigorous projects.

Class Size: 12-25

Learning Goals:

• Communicate ideas discussed in class, Life in the Universe: A Cosmic Perspective, to an interested but not necessarily educated audience.
• Synthesize topics and research to best express ideas.

Description:

Students created videos after researching one of the course's main topics, then presented their information in a video aimed at educating a non-scientific audience. Many students said that they were more engaged and the project made them think differently about the topic.
